November 2026

RESEARCH AREAS

AI agents: LLM agents and multi-agent simulations of household decision-making.

Human mobility: behavioral modeling and benchmarks grounded in individual GPS records.

Disaster mobility: travel before hazards, evacuation, and post-disaster recovery.

EDUCATION

2025-present — University of Florida, Gainesville, FL
Ph.D. in Civil and Coastal Engineering. Advisor: Xilei Zhao.

In progress — University of Florida, Gainesville, FL
M.S. in Artificial Intelligence Systems.

2021-25 — Colorado College, Colorado Springs, CO
B.A. in Computer Science and Mathematics, *magna cum laude*.
Study abroad: Aquincum Institute of Technology, Budapest.

RESEARCH EXPERIENCE

2025-present — University of Florida, SERMoS Lab
Graduate Research Assistant (Jul 2025 - present)
Build LLM agents for household negotiation and benchmarks that test what models recover from individual mobility records. Use GPS traces to study everyday mobility and how travel changes during evacuations and recovery.

2025 — MIT JTL-Transit Lab
Summer Research Intern (Jun - Jul 2025)
Combined policy documents with GTFS and GIS data in a spatial retrieval pipeline for the Chicago Transit Authority. Prototyped LLM agents for reasoning about transit delays and rerouting. Advisors: Haris Koutsopoulos and Muhammad Usama.

2023-25 — State of the Rockies, Colorado College
Research Fellow (May 2023 - May 2025)
Built NLP workflows for Indigenous oral histories and a GIS storytelling platform that linked themes from those histories with light pollution data at Bears Ears National Monument.

[*]Equal contribution (co-first authors).

AWARDS AND HONORS

2026 4th place out of 80 teams, HuMob Challenge, ACM SIGSPATIAL.

2026 ACM SIGSPATIAL Travel Grant.

Phi Beta Kappa
Euclid Scholar, Colorado College.

2022 Thomas Post Rawles Prize, lower division, Colorado College.

TEACHING

EGN 5215 **Machine Learning Applications in Civil Engineering**
Teaching Assistant, University of Florida. Instructor: Xilei Zhao.

RESEARCH SOFTWARE

GAUGE · Benchmark and code for evaluating whether LLMs recover mobility descriptors from individual location records.

GHOST · Open-source Python package for inferring home locations from GPS data using grid-based stay time.
